REASONS FOR ALLOWANCE

The instant invention is deemed to be directed to an unobvious improvement over the invention patented in U. S. Patent No. 6,666,127 to Peles. The improvement comprises an actuator with a fluid supply means connected for separately pressurizing the fluid muscle and the annulus, whereby the fluid muscle can be caused to contract to produce actuation movement of the second end by releasing pressure from the annulus.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

PRIOR ART

The patent to Peles is cited for the showing of an actuator similar to applicant's but lacking the ability to contract upon releasing pressure from the annulus.

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of four patents.

Guagliano et al. (6,352,455), Krauter (5,191,879), Negishi (5,067,390) and Yarlott (3,645,173) are cited to show flexible actuators.
